

**2x2 Crystalatch Switch****Description:**

The Crystalatch Series fiber optical switch connects optical channels by redirecting an incoming optical signal into a selected output fiber. This is achieved using patented non-mechanical configurations and activated via an electrical control signal. Latching operation preserves the selected optical path after the drive signal has been removed.

**Features:**

- 1.High Speed switch time
- 2.Low insertion loss & PDL
- 3.High cross talk
- 4.High stability and reliability
- 5.Path without epoxy

**Application:**

- 1.Optical channel blocking
- 2.Configurable Add or Drop
- 3.Laboratory
- 4.Monitory & detection
- 5.Instrumentation
