

## SAW FILTER Part Number : VTF39505

The VTF39505 is a low-loss, compact, and economical surface-acoustic-wave (SAW) filter in a surface-mount ceramic QCC8C case designed to provide front-end selectivity in 395.000 MHz receivers. Receiver designs using this filter include superhet with 10.7 MHz or 500 kHz IF, direct conversion and superregen.

1. Package Dimension (QCC8C)

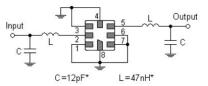

2. Marking

| Pin        | Connection     |  |
|------------|----------------|--|
| 2          | Input          |  |
| 5          | Output         |  |
| 1, 3, 6, 7 | To be Grounded |  |
| 4, 8       | Case Ground    |  |

| Sign Data (unit: mm) |      | Sign | Data (unit: mm) |  |  |
|----------------------|------|------|-----------------|--|--|
| А                    | 2.08 | E    | 1.20            |  |  |
| В                    | 0.60 | F    | 1.35            |  |  |
| С                    | 1.27 | G    | 5.00            |  |  |
| D                    | 2.54 | Н    | 5.00            |  |  |

| Frequency Agi                     | ng Absolute Value during the First Year | fA              |         | 10             |             | ppm/yr              |

(i) CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

- 1. The frequency  $f_C$  is defined as the midpoint between the 3dB frequencies.
- 2. Unless noted otherwise, all measurements are made with the filter installed in the specified test fixture that is connected to a 50Ω test system with VSWR≤1.2:1. The test fixture L and C are adjusted for minimum insertion loss at the filter center frequency, f<sub>c</sub>. Note that insertion loss, bandwidth, and passband shape are dependent on the impedance matching component values and quality.
- 3. Unless noted otherwise, specifications apply over the entire specified operating temperature range.
- 4. Frequency aging is the change in f<sub>C</sub> with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- 5. Turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_c$ , may be calculated from:  $f = f_0 [1 FTC (T_0 T_c)^2]$ .
- 6. The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- 7. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.
- 8. Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 9. For questions on technology, prices and delivery, please contact our sales offices or e-mail info@vtorch.ca
