

### SAW FILTER

Part Number: VTF91505

The VTF91505 is a low-loss, compact, and economical surface-acoustic-wave (SAW) filter in a surface-mount ceramic QCC8C case designed to provide front-end selectivity in 915.000 MHz receivers. Receiver designs using this filter include superhet with 10.7 MHz or 500 kHz IF, direct conversion and superregen.

# 1. Package Dimension (QCC8C)

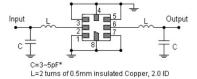

| Pin        | Connection     |  |  |
|------------|----------------|--|--|
| 2          | Input / Output |  |  |
| 6          | Output / Input |  |  |
| 1, 3, 5, 7 | To be Grounded |  |  |
| 4, 8       | Case Ground    |  |  |

| Sign | Data (unit: mm) | Sign | Data (unit: mm) |
|------|-----------------|------|-----------------|
| Α    | 2.08            | E    | 1.20            |
| В    | 0.60            | F    | 1.35            |
| С    | 1.27            | G    | 5.00            |
| D    | 2.54            | Н    | 5.00            |

# 2. Marking

### 3. Test Circuit

# Laser Marking

# 4. Typical Frequency Response

#### 5. Performance

# 5-1. Maximum Ratings

| Rating                      |              | Value      | Unit       |  |
|-----------------------------|--------------|------------|------------|--|
| Input Power Level           | Pin          | 10         | dBm        |  |
| DC Voltage                  | $V_{ m DC}$  | 12         | V          |  |
| Storage Temperature Range   | $T_{ m stg}$ | -40 to +85 | $^{\circ}$ |  |
| Operating Temperature Range | TA           | -10 to +60 | $^{\circ}$ |  |

# 5-2. Electronic Characteristics

|  | Characteristic                          |                 | Minimum | Typical | Maximum | Unit    |
|--|---|-----------------|---------|---------|---------|---------|
| Center Frequency (center frequency between 3dB points) |   | f <sub>C</sub>  |         | 915.000 |         | MHz     |
| Insertion Loss   |   | IL              |         | 4.0     | 5.5     | dB      |
| 3dB Pass band  | ı                                       | BW <sub>3</sub> |         | 1,200   |         | kHz     |
| Rejection  | at f <sub>C</sub> -21.4MHz (Image)      |                 | 30      | 42      | -       | dB      |
|  | at f <sub>C</sub> -10.7MHz (LO)         |                 | 20      | 35      |         |         |
|  | Ultimate                                |                 |         | 60      | -       |         |
| Temperature  | Turnover Temperature                    | To              | 25      |         | 55      | °C      |
|  | Turnover Frequency                      | fo              |         | fc      |         | MHz     |
|  | Frequency Temperature Coefficient       | FTC             |         | 0.032   |         | ppm/°C² |
| Frequency Agir   | ng Absolute Value during the First Year | fA              |         | 10      |         | ppm/yr  |

(i) CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

- 1. The frequency  $f_{\mathbb{C}}$  is defined as the midpoint between the 3dB frequencies.
- 2. Unless noted otherwise, all measurements are made with the filter installed in the specified test fixture that is connected to a 50Ω test system with VSWR≤1.2:1. The test fixture L and C are adjusted for minimum insertion loss at the filter center frequency, f<sub>C</sub>. Note that insertion loss, bandwidth, and passband shape are dependent on the impedance matching component values and quality.
- 3. Unless noted otherwise, specifications apply over the entire specified operating temperature range.
- 4. Frequency aging is the change in f<sub>C</sub> with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- 5. Turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_C$ , may be calculated from:  $f = f_0 [1 FTC (T_0 T_C)^2]$ .
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- 7. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.
- 8. Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 9. For questions on technology, prices and delivery, please contact our sales offices or e-mail info@vtorch.ca
